Power Amplifier

MC205
Owner’s Manual
The lightning flash with arrowhead, within an equilateral triangle, is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product’s enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

WARNING - TO REDUCE RISK OF FIRE OR ELECTRICAL SHOCK, DO NOT EXPOSE THIS EQUIPMENT TO RAIN OR MOISTURE.

NO USER-SERVICEABLE PARTS INSIDE. REFER SERVICING TO QUALIFIED PERSONNEL.

To prevent the risk of electric shock, do not remove cover or back. No user-serviceable parts inside.

IMPORTANT SAFETY INSTRUCTIONS!

PLEASE READ THEM BEFORE OPERATING THIS EQUIPMENT.

1. Read these instructions.
2. Keep these instructions.
3. Heed all warnings.
4. Follow all instructions.
5. Do not use this apparatus near water.
6. Clean only with a dry cloth.
7. Do not block any ventilation openings. Install in accordance with the manufacturer’s instructions.
8. Do not install near any heat sources such as radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat.
9. Do not defeat the safety purpose of the polarized or grounding-type plug. A polarized plug has two blades with one wider than the other. A grounding type plug has two blades and a third grounding prong. The wide blade or the third prong are provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.
10. Protect the power cord from being walked on or pinched particularly at plugs, convenience receptacles, and the point where they exit from the apparatus.
11. Only use attachments/accessories specified by the manufacturer.
12. Use only with the cart, stand, tripod, bracket, or table specified by the manufacturer, or sold with the apparatus. When a cart is used, use caution when moving the cart/apparatus combination to avoid injury from tip-over.
13. Unplug this apparatus during lightning storms or when unused for long periods of time.
14. Refer all servicing to qualified service personnel. Servicing is required when the apparatus has been damaged in any way, such as power-supply cord or plug is damaged, liquid has been spilled or objects have fallen into the apparatus, the apparatus has been exposed to rain or moisture, does not operate normally, or has been dropped.
15. Do not expose this equipment to dripping or splashing and ensure that no objects filled with liquids, such as vases, are placed on the equipment.
16. To completely disconnect this equipment from the a.c. mains, disconnect the power supply cord plug from the a.c. receptacle.
17. The mains plug of the power supply cord shall remain readily operable.
18. Do not expose batteries to excessive heat such as sunshine, fire or the like.
Thank You

Your decision to own this McIntosh MC205 Power Amplifier ranks you at the very top among discriminating music listeners. You now have “The Best.” The McIntosh dedication to “Quality,” is assurance that you will receive many years of musical enjoyment from this unit.

Please take a short time to read the information in this manual. We want you to be as familiar as possible with all the features and functions of your new McIntosh.

Please Take A Moment

The serial number, purchase date and McIntosh Dealer name are important to you for possible insurance claim or future service. The spaces below have been provided for you to record that information:

Serial Number: __________________________________
Purchase Date: __________________________________
Dealer Name: ___________________________________

Technical Assistance

If at any time you have questions about your McIntosh product, contact your McIntosh Dealer who is familiar with your McIntosh equipment and any other brands that may be part of your system. If you or your Dealer wish additional help concerning a suspected problem, you can receive technical assistance for all McIntosh products at:

McIntosh Laboratory, Inc.
2 Chambers Street
Binghamton, New York 13903
Phone: 607-723-1545
Fax: 607-724-0549

Customer Service

If it is determined that your McIntosh product is in need of repair, you can return it to your Dealer. You can also return it to the McIntosh Laboratory Service Department. For assistance on factory repair return procedure, contact the McIntosh Service Department at:

McIntosh Laboratory, Inc.
2 Chambers Street
Binghamton, New York 13903
Phone: 607-723-3515
Fax: 607-723-1917

Connector and Cable Information

XLR Connectors
Below is the Pin configuration for the XLR Balanced Input Connectors on the MC205. Refer to the diagram for connection:

PIN 1: Shield/Ground
PIN 2: + Output
PIN 3: - Output

Power Control Connector
The MC205’s Power Control Inputs receive On/Off signals of +5 volts. An additional connection is for controlling the illumination of the MC205 Power Output Meters. The 1/8 inch stereo mini phone plug connects to a McIntosh A/V Control Center Power Control Output.

Note: The Power Control Connecting Cable is available from the McIntosh Parts Department:
Data and Power Control Cable Part No. 170-202
Six foot, shielded 2 conductor, with 1/8 inch stereo mini phone plugs on each end.

Introduction
Now you can take advantage of traditional McIntosh standards of excellence in the MC205 Power Amplifier. The five channel Power Amplifier produces a power output of 200 watts per channel and will drive quality Loudspeakers to a high level of performance. The MC205 reproduction is sonically transparent and absolutely accurate. The McIntosh Sound is “The Sound of the Music Itself.”

Performance Features
• Power Output
The MC205 consists of five Power Amplifier Channels, each capable of 200 watts into 4 ohm or 8 ohm Loudspeakers with less than 0.005% distortion.

• Power Guard
The patented McIntosh Power Guard Circuit prevents the amplifier from being over driven into clipping, with its harsh distorted sound that can damage your valuable Loudspeakers.

• Dynamic Power Manager™
The MC205’s Dynamic Power Manager (DPM) circuitry allows for the connection of either 4 ohm or 8 ohm Loud-
The following dimensions can assist in determining the best location for your MC205. There is additional information on the next page pertaining to installing the MC205 into cabinets.

Front View of the MC205

Rear View of the MC205

Side View of the MC205
Installation

The MC205 can be placed upright on a table or shelf, standing on its four feet. It also can be custom installed in a piece of furniture or cabinet of your choice. The four feet may be removed from the bottom of the MC205 when it is custom installed as outlined below. The four feet together with the mounting screws should be retained for possible future use if the MC205 is removed from the custom installation and used free standing. The required panel cutout, ventilation cutout and unit dimensions are shown. Always provide adequate ventilation for your MC205. Cool operation ensures the longest possible operating life for any electronic instrument. Do not install the MC205 directly above a heat generating component such as a high powered amplifier. If all the components are installed in a single cabinet, a quiet running ventilation fan can be a definite asset in maintaining all the system components at the coolest possible operating temperature. A custom cabinet installation should provide the following minimum spacing dimensions for cool operation. Allow at least 6 inches (15.24cm) above the top, 2 inches (5.08cm) below the bottom and 1 inch (2.54cm) on each side of the Power Amplifier, so that airflow is not obstructed. Allow 19-1/2 inches (49.53cm) depth behind the front panel. Allow 7/8 inch (2.22cm) in front of the mounting panel for clearance. Be sure to cut out a ventilation hole in the mounting shelf according to the dimensions in the drawing.

\[1\] When the MC205 is installed together with other McIntosh Components, check clearances on all components before proceeding.
Connect the MC205 power cord to a live AC outlet. Refer to the rear panel to determine the correct voltage.

OUTPUT Connections for a 4 ohm or 8 ohm Loudspeaker for Channel 1 (Left Front)

OUTPUT Connections for a 4 ohm or 8 ohm Loudspeaker for Channel 2 (Left Surround) or ZONE B Left Channel

OUTPUT Connections for a 4 ohm or 8 ohm Loudspeaker for Channel 3 (Center Front)

OUTPUT Connections for a 4 ohm or 8 ohm Loudspeaker for Channel 4 (Right Surround) or ZONE B Right Channel

OUTPUT Connections for a 4 ohm or 8 ohm Loudspeaker for Channel 5 (Right Front) or ZONE B Right Channel

Balanced INPUT Channel 1 (Left Front) and Channel 3 (Center Front)

Unbalanced INPUTs Channel 2 (Left Surround) and Channel 4 (Right Surround) or ZONE B Left and Right Channels

Unbalanced INPUT Channel 5 (Right Front)

Unbalanced INPUTs Channel 2 (Left Surround) and Channel 4 (Right Surround) or ZONE B Left and Right Channels

Balanced INPUT Channel 4 (Right Surround) or ZONE B Right Channel

Balanced INPUT Channel 2 (Left Surround) or ZONE B Left Channel

Balanced INPUTS Channel 5 (Right Front) and Channel 3 (Center Front)

POWER CONTROL ZA receives turn On/Off signals from a McIntosh component for Zone A (Channels 1-5). ZB receives turn On/Off signals from a McIntosh component for Zone B (Channels 2 and 4).
How to Connect for a Five Channel System

**Caution:** The supplied AC Power Cord should not be connected to the Rear Panel of the MC205 Power Amplifier until after the Loudspeaker Connections have been made. Failure to observe this could result in Electric Shock.

1. Connect Audio Cables from the Zone A Unbalanced Outputs of a McIntosh A/V Control Center to the MC205 INPUTS (Channels 1-5), making sure to match up the channel identifications between both units.
   
   *Note: In place of the Unbalanced Audio Cables, Balanced Cables may be used.*

2. Connect a power control cable from the McIntosh A/V Control Center Zone A Power Control Out to the MC205 POWER CONTROL ZA.

   When connecting Loudspeakers to the MC205 it is very important to use cables of adequate size, so there is little to no power loss in the cables. The size is specified in Gauge Numbers or AWG (American Wire Gauge). The smaller the Gauge number, the larger the wire size:
   
   *If your loudspeaker cables are 50 feet (38.1m) or less, use at least 14 Gauge.*
   *If your loudspeaker cables are 100 feet (76.2m) or less, use at least 12 Gauge.*

3. Prepare the Loudspeaker Hookup Cables that attach to the MC205 Power Amplifier by choosing one of the methods below:

   **Bare wire cable ends:**
   
   Carefully remove sufficient insulation from the cable ends, refer to figures 1, 2 & 3. If the cable is stranded, carefully twist the strands together as tightly as possible.
   
   *Note: If desired, the twisted ends can be tinned with solder to keep the strands together, or attach spade lug and/or banana connector.*

   **Spade lug or prepared wire connection:**
   
   Insert the spade lug connector or prepared section of the cable end into the terminal side access hole, and tighten the terminal cap until the cable is firmly clamped into the terminal so the wires cannot slip out. Refer to figures 4, 5 & 6.

   **Banana plug connection:**
   
   Tighten the top portion of the terminal post and insert the banana plug into the opening at the top of the terminal. Refer to figure 7.
   
   *Note: The use of Banana Plugs is for use in the United States and Canada only.*

4. Connect the Loudspeaker Hookup Cables from the MC205 OUTPUT Terminals to the Loudspeakers, being careful to observe the correct polarities and channel designation.

   **WARNING:** Loudspeaker terminals are hazardous live and present a risk of electric shock. For additional instruction on making Loudspeaker Connections contact your McIntosh Dealer or McIntosh Technical Support.

5. Place the IMPEDANCE Switch to the position (4 ohm or 8 ohm) that matches the impedance of the connected Loudspeakers. In the event that some of the Loudspeakers in the system are of different impedance, use the impedance of the Left and Right Front Loudspeakers to set the IMPEDANCE Switch position.

6. Connect the MC205 Power Cord to an active AC outlet.

How to Connect for a Seven Channel System

**Caution:** The supplied AC Power Cord should not be connected to the Rear Panel of the MC205 Power Amplifier until after the Loudspeaker Connections have been made. Failure to observe this could result in Electric Shock.

1. Connect Audio Cables from the Zone A Unbalanced Outputs of a McIntosh A/V Control Center to the MC205 INPUTS (Channels 1-5), making sure to match up the channel identifications between both units.
   
   Notes: In place of the Unbalanced Audio Cables, Balanced Cables may be used. The Left and Right Front Channels are amplified by a McIntosh Two Channel Power Amplifier.

2. Connect a power control cable from the McIntosh A/V Control Center Zone A Power Control Out to the McIntosh Two Channel Power Amplifier Power Control Input Jack. Connect a second power control cable from the McIntosh two Channel Power Amplifier Power Control Output jack to the MC205 POWER CONTROL ZA Jack.

   When connecting Loudspeakers to the MC205 it is very important to use cables of adequate size, so there is little to no power loss in the cables. The size is specified in Gauge Numbers or AWG (American Wire Gauge). The smaller the Gauge number, the larger the wire size:
   
   - If your loudspeaker cables are 50 feet (38.1m) or less, use at least 14 Gauge.
   - If your loudspeaker cables are 100 feet (76.2m) or less, use at least 12 Gauge.

3. Prepare the Loudspeaker Hookup Cables that attach to the MC205 Power Amplifier by choosing one of the methods below:

   **Bare wire cable ends:**
   Carefully remove sufficient insulation from the cable ends, refer to figures 1, 2 & 3. If the cable is stranded, carefully twist the strands together as tightly as possible.
   
   Note: If desired, the twisted ends can be tinned with solder to keep the strands together, or attach spade lug and/or banana connector.

   **Spade lug or prepared wire connection:**
   Insert the spade lug connector or prepared section of the cable end into the terminal side access hole, and tighten the terminal cap until the cable is firmly clamped into the terminal so the wires cannot slip out. Refer to figures 4, 5 & 6.

   **Banana plug connection:**
   Tighten the top portion of the terminal post and insert the banana plug into the opening at the top of the terminal. Refer to figure 7.
   
   Note: The use of Banana Plugs is for use in the United States and Canada only.

4. Connect the Loudspeaker Hookup Cables from the MC205 OUTPUT Terminals to the Loudspeakers, being careful to observe the correct polarities and channel designation.

   **WARNING:** Loudspeaker terminals are hazardous live and present a risk of electric shock. For additional instruction on making Loudspeaker Connections contact your McIntosh Dealer or McIntosh Technical Support.

5. Place the IMPEDANCE Switch to the position (4 ohm or 8 ohm) that matches the impedance of the connected Loudspeakers. In the event that some of the Loudspeakers in the system are of different impedance, use the impedance of the Left and Right Front Loudspeakers to set the IMPEDANCE Switch position.

6. Connect the MC205 Power Cord to an active AC outlet.

How to Connect for a Five Channel and Zone B System

1. Connect Audio Cables from the Zone A Unbalanced Outputs of a McIntosh A/V Control Center to the MC205 INPUTS (Channels 1, 3 and 5), making sure to match up the channel identifications between both units. Connect Audio Cables from the Zone B Unbalanced Outputs of a McIntosh A/V Control Center to the MC205 INPUTS (Channels 2 and 4), making sure to match up the channel identifications between both units.

   Note: In place of the Unbalanced Audio Cables, Balanced Cables may be used for the Zone A Connections.

2. Connect a power control cable from the McIntosh A/V Control Center Zone A Power Control Out to the McIntosh Two Channel Power Amplifier Power Control Input Jack. Connect a second power control cable from the McIntosh two Channel Power Amplifier Power Control Output jack to the MC205 POWER CONTROL ZA Jack. Connect power control cables from the McIntosh A/V Control Center Zone B Power Control Output jacks to the MC205 POWER CONTROL ZB jack.

   When connecting Loudspeakers to the MC205 it is very important to use cables of adequate size, so there is little to no power loss in the cables. The size is specified in Gauge Numbers or AWG (American Wire Gauge). The smaller the Gauge number, the larger the wire size:
   - If your loudspeaker cables are 50 feet (38.1m) or less, use at least 14 Gauge.
   - If your loudspeaker cables are 100 feet (76.2m) or less, use at least 12 Gauge.

3. Prepare the Loudspeaker Hookup Cables that attach to the MC205 Power Amplifier by choosing one of the methods below:

   **Bare wire cable ends:**
   Carefully remove sufficient insulation from the cable ends, refer to figures 1, 2 & 3. If the cable is stranded, carefully twist the strands together as tightly as possible.
   
   Note: If desired, the twisted ends can be tinned with solder to keep the strands together, or attach spade lug and/or banana connector.

   **Spade lug or prepared wire connection:**
   Insert the spade lug connector or prepared section of the cable end into the terminal side access hole, and tighten the terminal cap until the cable is firmly clamped into the terminal so the wires cannot slip out. Refer to figures 4, 5 & 6.

   **Banana plug connection:**
   Tighten the top portion of the terminal post and insert the banana plug into the opening at the top of the terminal. Refer to figure 7.

   Note: The use of Banana Plugs is for use in the United States and Canada only.

4. Connect the Loudspeaker Hookup Cables from the MC205 OUTPUT Terminals to the Loudspeakers, being careful to observe the correct polarities and channel designation. **WARNING:** Loudspeaker terminals are hazardous live and present a risk of electric shock. For additional instruction on making Loudspeaker Connections contact your McIntosh Dealer or McIntosh Technical Support.

5. Place the IMPEDANCE Switch to the position (4 ohm or 8 ohm) that matches the impedance of the connected Loudspeakers. In the event that some of the Loudspeakers in the system are of different impedance, use the impedance of the Left and Right Front Loudspeakers to set the IMPEDANCE Switch position.

6. Connect the MC205 Power Cord to an active AC outlet.

McIntosh Two Channel Power Amplifier

Diagram showing connections and layout of the speakers and amplifier.
Front Panel Displays and Switches

LED indicates when Amplifier Channels 1, 3 or 5 POWER GUARD circuit activates.

Meter indicates the Power Output of the amplifier for Channels 1, 3 and 5.

METER LIGHTS Switch selects the Meter Illumination On or Off.

POWER Switch Turns AC Power On or Off/Remote (On/Off).

Standby Power On Indicator.

LED indicates when Amplifier Channels 2 or 4 POWER GUARD circuit activates.
**How to Operate the MC205**

### Power

With the POWER Switch set to the OFF/REMOTE Position, the MC205 will turn On or Off when an A/V Control Center turns On or Off. For manual operation, place the POWER Switch to the ON Position as desired. Refer to figure 8.

*Note: There must be a power control connection between the MC205 and the McIntosh A/V Control Center in order for the remote power turn-on to function.*

### Meter Illumination

Place the METER LIGHTS Switch to the ON position for Illuminated Meters or place the switch to the Off position for no Illumination. When Power Control Input ZA (Zone A only) of the MC205 is connected to a McIntosh A/V Control Center or Preamplifier with Remote Meter Illumination Control, the Meter Illumination will automatically be remotely controlled (On/Off) with the METER LIGHTS Switch to set to the ON position. Refer to figure 9.

### Impedance Switch

The MC205’s Dynamic Power Manager circuitry allows for the connection of either 4 ohm or 8 ohm Loudspeakers to its output terminals, while at the same time delivering the same power output. Refer to figure 10. Place the IMPEDANCE Switch, located on the rear panel, to the position (4 ohm or 8 ohm) that matches the impedance of the connected Loudspeakers. In the event that some of the Loudspeakers in the system are of different impedance, use the impedance of the Left and Right Front Loudspeakers to set the IMPEDANCE Switch position. Refer to figure 11.

### Power Output Meters

The MC205 Power Output Meters are calibrated to allow for the direct reading of either the Power Output in Watts or Decibels for Loudspeakers connected to Channels 1, 3 and 5. The meters respond to all the musical information being produced by the amplifier. They indicate to an accuracy of at least 95% of the power output with only a single cycle of a 2000Hz tone burst. Refer to figure 12.
A continuous average power output rating of 200 watts and an output current of greater than 25 amperes per channel, makes this one of the most advanced and powerful amplifiers McIntosh has ever manufactured. Refer to figures 13 and 14. The distortion limits for the MC205 are no more than 0.005% at rated power output for all frequencies from 20Hz to 20,000Hz. Typical performance at mid-frequencies is less than 0.002%. The true distortion readings on the MC205 are so low, it takes special measuring techniques to make accurate readings. The MC205 can deliver the best possible performance from any type of high-quality Loudspeaker System.

**Design Philosophy**

The MC205 McIntosh Power Amplifier uses the recently developed Dynamic Power Manager™ (DPM) Circuitry. The MC205 can easily drive 4 ohm speakers, with their high current demand. Additionally, the MC205 can be used with 8 ohm speakers, and deliver equal power. McIntosh’s new DPM™ design enables it to run on higher voltage rails when connected to less current-hungry 8 ohm speakers and still deliver 200 watts. The power penalty usually paid with 8 ohm speakers on high current amplifiers does not exist with this new design.

The high efficiency circuit design of the MC205 contributes to low operating temperatures. More than 2100 square inches of heat sink area occupies almost half of the MC205’s chassis space and keeps the amplifier operating safely with convection cooling. No fans are needed.

**Protection Circuits**

The MC205 incorporates its version of the McIntosh Sentry Monitor output transistor protection circuit. There is absolutely no compromise in sonic performance with this circuit, and it ensures safe operation of the amplifier under even the most extreme operating conditions. The different types of protection circuits incorporated in the MC205 ensure a long and safe operating life.

The MC205 also includes the unique patented McIntosh Power Guard circuit. Power Guard eliminates the possibility of ever overdriving the amplifier into clipping. Refer to figures 15, 16 and 17. An overdriven amplifier can produce both audible and inaudible distortion levels exceeding 40%. The audible distortion levels can be as high as 40%. The audible distortion levels can be as high as 40%.
distortion is unpleasant to hear, but the inaudible ultrasonic distortion is also undesirable, since it can damage valuable Loudspeaker System tweeters. You will never experience the harsh and damaging distortion due to clipping. The Power Guard circuit is a waveform comparator, monitoring both the input and output waveforms. Under normal operating conditions, there are no differences between the shape of these waveforms. If an amplifier channel is overdriven, there will be a difference between the two signal waveforms. When the difference exceeds 0.3% (equivalent to 0.3% harmonic distortion), the Power Guard activates the PG light and a dynamic electronic attenuator at the amplifier input reduces the input volume just enough to prevent any further increase in distortion. The Power Guard circuit acts so fast that there are absolutely no audible side effects and the sonic purity of the music reproduction is perfectly preserved. The MC205 Power Amplifier with Power Guard is not limited to just the rated power output, but will actually produce distortion free output well above its rated power due to the McIntosh philosophy of conservative design.

**Power Supply Circuits**

To compliment the design of the MC205, there is a high current power supply for the five power amplifier channels. Refer to figure 18. The very large Power Transformer, has toroidal windings on a toroidal core and can supply over 35 amps of continuous current. Refer to figure 19 (golf ball is for size comparison). It is enclosed in the legendary McIntosh Potted Enclosures and weighs over 12.06kg. The super size main filter capacitors can store over 310 Joules of energy for the five amplifier channels, necessary for the wide dynamic range that “Digital Audio” demands. Refer to figure 23. The power amplifier draws high current from the AC power line. Therefore, it is important that they plug directly into the wall outlet.

Also, most owners desire one power switch for the whole audio system. The MC205 is equipped with a circuit that provides remote Power Control from a McIntosh A/V Control Center. When the A/V Control Center is switched On, a (+5V) signal operates the power relay in the MC205. The MC205 also has a remote Power Control input for Zone B operation (two of the five channels).
## Specifications

### Power Output
Minimum sine wave continuous average power output per channel, all channels operating is:
- 200 watts into a 4 ohm or 8 ohm load

### Output Load Impedance
8 and 4 ohms

### Rated Power Band
20Hz to 20,000Hz

### Total Harmonic Distortion
0.005% maximum harmonic distortion at any power level from 250 milliwatts to rated power, 20Hz to 20,000Hz

### Dynamic Headroom
1.7dB

### Frequency Response
+0, -0.25dB from 20Hz to 20,000Hz
+0, -3dB from 10Hz to 100,000Hz

### Input Sensitivity (for rated output)
2.0 Volt Balanced with a 4 ohm Loudspeaker
1.0 Volt Unbalanced with a 4 ohm Loudspeaker
2.8 Volt Balanced with a 8 ohm Loudspeaker
1.4 Volt Unbalanced with a 8 ohm Loudspeaker

### Signal To Noise Ratio (A-Weighted)
112dB below rated output

### Intermodulation Distortion
0.005% maximum, if the instantaneous peak power output is rated power or less per channel with all channels operating for any combination of frequencies from 20Hz to 20,000Hz.

### Wide Band Damping Factor
- Greater than 70 at 4 ohms
- Greater than 140 at 8 ohms

### Input Impedance
- 20,000 ohms Balanced
- 10,000 ohms Unbalanced

### Power Guard
Less than 2% THD with up to 14dB overdrive at 1,000Hz

### Power Requirements
- 100 Volts, 50/60Hz at 12 Amps
- 110 Volts, 50/60Hz at 11 Amps
- 120 Volts, 50/60Hz at 10 Amps
- 220 Volts, 50/60Hz at 6 Amps
- 230 Volts, 50/60Hz at 6 Amps
- 240 Volts, 50/60Hz at 6 Amps

*Note: Refer to the rear panel of the MC205 for the correct voltage.*

### Overall Dimensions
- Width is 17-1/2 inches (44.45cm)
- Height is 9-7/16 inches (23.97cm) including feet
- Depth is 21 inches (53.3cm) including the Front Panel and Cables

### Weight
- 81 pounds (44.2 kg) net, 114 pounds (51.8 kg) in shipping carton

### Shipping Carton Dimensions
- Width is 29-1/2 inches (74.93cm)
- Depth is 30-1/2 inches (77.47cm)
- Height is 17-1/2 inches (44.45cm)
In the event it is necessary to repack the equipment for shipment, the equipment must be packed exactly as shown below. It is very important that the four plastic feet are attached to the bottom of the equipment. Four 1/4 - 20 x 2-1/2 inch screws and washers must be used to fasten the unit securely to the bottom pad and shipping skid. This will ensure the proper equipment location on the bottom pad. Failure to do this will result in shipping damage.

Use the original shipping carton and interior parts only if they are all in good serviceable condition. If a shipping carton or any of the interior part(s) are needed, please call or write Customer Service Department of McIntosh Laboratory. Please see the Part List for the correct part numbers.
The continuous improvement of its products is the policy of McIntosh Laboratory Incorporated who reserve the right to improve design without notice. Printed in the U.S.A.
