MR85 AM/FM Tuner
Thank You
Your decision to own this McIntosh MR85 AM/FM Tuner ranks you at the very top among discriminating music listeners. You now have “The Best.” The McIntosh dedication to “Quality,” is assurance that you will receive many years of musical enjoyment from this unit.

Please take a short time to read the information in this manual. We want you to be as familiar as possible with all the features and functions of your new McIntosh.

Please Take A Moment
The serial number, purchase date and McIntosh dealer name are important to you for possible insurance claim or future service. The spaces below have been provided for you to record that information:

Serial Number: ________________________________
Purchase Date: ______________________________
Dealer Name: ________________________________

Technical Assistance
If at any time you have questions about your McIntosh product, contact your McIntosh dealer who is familiar with your McIntosh equipment and any other brands that may be part of your system. If you or your dealer wish additional help concerning a suspected problem, you can receive technical assistance for all McIntosh products at:

McIntosh Laboratory, Inc.
2 Chambers Street
Binghamton, New York 13903
Phone: 607-723-3512
Fax: 607-723-3636

Customer Service
If it is determined that your McIntosh product is in need of repair, you can return it to your dealer. You can also return it to the McIntosh Laboratory Service Repair Department. For assistance on factory repair return procedure, contact the McIntosh Repair Department at:

McIntosh Laboratory, Inc.
2 Chambers Street
Binghamton, New York 13903
Phone: 607-723-3515
Fax: 607-723-1917

General Notes
1. The following Connecting Cable is available from the McIntosh Parts Department:
   Data and Power Control Cable Part No. 170-202
   Six foot, 2 conductor shielded, with two 1/8 inch stereo mini phone plugs.
2. For additional connection information, refer to the owner’s manual(s) for any component(s) connected to the MR85.
3. The MR85 AM/FM Tuner has the provision for adding an optional second AM/FM Tuner Module. With the addition of this second tuner, you can be listening to two different radio stations simultaneously. This allows for such capabilities as listening to one station while at the same time recording a different station; you can be listening to one station, while at the same time another station is being listened to in a second room. The McIntosh TM1 Module is available from and should be installed by your McIntosh Dealer.
4. Several different types of FM antennas or cable reception can be used with the MR85.
   A. A flexible indoor dipole antenna makes a convenient antenna for high signal strength areas. An indoor antenna may not prove effective in houses or buildings with metal siding or insulation.
   B. An existing outdoor directional VHF-TV/FM or FM only Antenna with a rotor can be connected and will provide the best reception. Consult your McIntosh Dealer for assistance.
   C. A signal from your local cable company can also be connected. Consult your cable company for installation assistance.
5. FM Antenna connections to the MR85 require either RG6 or RG59U coaxial cable.

Copyright 2000 © by McIntosh Laboratory, Inc.
IMPORTANT SAFETY INSTRUCTIONS!

PLEASE READ THEM BEFORE OPERATING THIS EQUIPMENT.

WARNING SHOCK HAZARD - DO NOT OPEN.
The lightning flash with arrowhead, within an equilateral triangle, is intended to alert the user to the presence of uninsulated “dangerous voltage” within the product’s enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

AVIS RISQUE DE CHOC - NE PAS OUVRIR.
The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (service) instructions in the literature accompanying the appliance.

NO USER-SERVICEABLE PARTS INSIDE. REFER SERVICING TO QUALIFIED PERSONNEL.
To prevent the risk of electric shock, do not remove cover (or back). No user serviceable parts inside. Refer servicing to qualified personnel.

General:
1. Read all the safety and operating instructions, contained in this owner’s manual, before operating this equipment.
2. Retain this owner’s manual for future reference about safety and operating instructions.
3. Adhere to all warnings and operating instructions.
4. Follow all operating and use instructions.
5. Warning: To reduce risk of fire or electrical shock, do not expose this equipment to rain or moisture. This unit is capable of producing high sound pressure levels. Continued exposure to high sound pressure levels can cause permanent hearing impairment or loss. User caution is advised and ear protection is recommended when playing at high volumes.
6. Caution: to prevent electrical shock do not use this (polarized) plug with an extension cord, receptacle or other outlet unless the blades can be fully inserted to prevent blade exposure.

Attention: pour venir les chocs electriques pas utiliser cette fiche polarisee avec un prolongateur, une prise de courant ou un autre sortie de courant, sauf si les lames peuvent etre inserees a fond ans en laisser aucune partie a decouvert.
7. For added protection for this product during a lightning storm, or when it is left unattended and unused for long periods of time, unplug it from the wall outlet and disconnect the antenna or cable system. This will prevent damage to the product due to lightning or power line surges.
8. Do not use attachments not recommended in this owner’s manual as they may cause hazards.

Installation:
9. Locate the equipment for proper ventilation. For example, the equipment should not be placed on a bed, sofa, rug, or similar surface that may block ventilation openings; or, placed in a built-in installation, such as a bookcase or cabinet, that may impede the flow of air through the ventilation openings.
10. Locate the equipment away from heat sources such as radiators, heat registers, stoves, or other appliance(s) (including amplifiers) that produce heat.
11. Mount the equipment in a wall or cabinet only as described in this owner’s manual.
12. Do not use this equipment near water; for example, near a bathtub, washbowl, kitchen sink, laundry tub, in a wet basement or near a swimming pool, etc.
13. Do not place this product on an unstable cart, stand, tripod, bracket, or table. The equipment may fall, causing serious injury to a person, and serious damage to the product.

Connection:
14. Connect this equipment only to the type of AC power source as marked on the unit.
15. Route AC power cords so that they are not likely to be walked on or pinched by items placed upon or against them, paying particular attention to cords at plugs, convenience receptacles, and the point where they exit from the instrument.
16. Do not defeat the inherent design features of the polarized plug. Non-polarized line cord adapters will defeat the safety provided by the polarized AC plug. If the plug should fail to fit, contact your electrician to replace your obsolete outlet. Do not defeat the safety
purpose of the grounding-type plug.
17. Do not overload wall outlets, extension cords or integral convenience receptacles as this can result in a risk of fire or electric shock.

Outdoor Antenna:
18. If an outdoor antenna is connected to the antenna terminal, be sure the antenna system is grounded to provide some protection against voltage surges and built up static charge. In the U.S.A., section 810 of the National Electrical Code, ANSI/NFPA No. 70-1978, provides information on the proper ground for the mast and supporting structure, ground for the lead-in wire to an antenna discharge unit, and size of ground conductors, location of antenna-discharge unit, connection to ground electrode. For ground wire:
A. Use No. 10 AWG (5.3 mm²) copper No. 8 AWG (8.4 mm²) aluminum, No. 17 AWG (1.0 mm²) copper-clad steel, bronze, or larger as ground wire.
B. Secure antenna lead-in and ground wires to the house with stand-off insulators spaced from 4 feet (1.2 meters) to 6 feet (1.83 meters) apart.
C. Mount antenna discharge unit as closely as possible to where lead-in enters house.
D. Use jumper wire not smaller than No. 6 AWG (13.3 mm²) copper or equivalent when separate antenna grounding electrode is used.

20. Do not permit objects or liquids of any kind to be pushed, spilled and/or fall into the equipment through enclosure openings.
21. Unplug the power cord from the AC power outlet when left unused for a long period of time.

Repair of Equipment:
22. Unplug this equipment from the wall outlet and refer servicing to a qualified service personnel under the following conditions:
A. The AC power cord or the plug has been damaged.
B. Objects have fallen, or liquid has been spilled into the equipment.
C. The equipment has been exposed to rain or water.
D. The equipment does not operate normally by following the operating instructions contained within this owner’s manual. Adjust only those controls that are covered by the operating instructions, as an improper adjustment of other controls may result in damage and will often require extensive work by a qualified technician to restore the product to its normal operation.
E. The equipment has been dropped or damaged in any way.
F. The equipment exhibits a distinct change in performance - this indicates a need for service.
23. Do not attempt to service beyond that described in the operating instructions. All other service should be referred to qualified service personnel.
24. When replacement parts are required, be sure the service technician has used replacement parts specified by McIntosh or have the same characteristics as the original part. Unauthorized substitutions may result in fire, electric shock, or other hazards.
25. Upon completion of any service or repairs to this product, ask the service technician to perform safety checks to determine that the product is in proper operating condition.

Care of Equipment:
19. Clean the instrument by dusting with a dry cloth. Unplug this equipment from the wall outlet and clean the panel with a cloth moistened with a window cleaner. Do not use liquid cleaners or aerosol cleaners.
Introduction

The MR85 AM/FM Tuner is an elegant instrument that allows you to enjoy outstanding music reproduction. It includes a wide range of convenient operating functions to enhance your listening experience. The classic McIntosh MR85 will perfectly complement a McIntosh System of incomparable performance and style.

Performance Features

- **Special FM RF Amplifier**
  Double-Diffused Metal Oxide Field Effect Transistor (DMOS-FET) RF amplifier increases sensitivity and Cross Modulation rejection.

- **External AM RF Amplifier**
  The MR85 includes an electrostatically shielded AM RF Amplifier Stage with a shielded connecting cable that allows it to be located in a remote area, away from sources of interference. The Amplifier Stage can be adjusted for optimum signal strength at both ends of the AM dial and can be positioned for the best possible reception of even the weakest AM stations.

- **Flywheel Manual Tuning**
  A newly designed, optically encoded weighted flywheel system makes ‘dialing in’ stations an easy job. Reminiscent of the dial-cord flywheel tuning method found in classic McIntosh Tuners.

- **FM Stereo Auto Blend Circuity**
  An automatic variable stereo separation control circuit is used to reduce background noise when receiving weak stereo stations.

- **Automute**
  The MR85 automatically mutes when manually tuning between stations, yet provides the ability to be switched off when searching for very weak stations.

- **Spatial Sound Enhancement**
  A sound Spatializer circuit can be selected for Tuner 1 Enhancement. This circuit can expand the sound field for FM stations with poor separation, or can provide a pseudo-stereo effect for AM stations.

- **Optional Second Tuner Module**
  A second fully independent McIntosh TM1 Tuner Module may be added to the MR85 by your dealer. This is ideal for applications where two tuners may be used at the same time, such as Multizone Systems or listening to one station while recording another station. The TM1 is the most economical way to add a second high performance McIntosh Tuner to a system.

- **Preset Stations**
  Nine AM and nine FM station presets for each tuner module make it easy to listen to your favorite stations.

- **Custom Preset Naming**
  All 9 AM and 9 FM station presets for each tuner module may be custom labeled with any desired name up to 8 characters. For example, FM Preset Number 3 (92.50MHz) can be renamed “JAZZ 7”, or “WXYZ”.

- **Permanent Memory**
  Station Presets and Functions Modes are retained in Permanent Memory even when AC power is turned off.

- **Alphanumeric Fluorescent Display**
  The Multi-function Front Panel Display indicates station frequency, station preset number, signal strength, stereo and broadcast band. Custom Naming for each Preset can also be displayed. The display intensity is fully adjustable.

- **Adjustable Output Level**
  Both Tuner 1 and the optional Tuner 2 have Variable Outputs which can be used to match audio levels between various sources.

- **Remote Control Capable**
  When used in conjunction with a McIntosh Control Center or Multizone Controller, tuning functions can be performed with a remote control.

- **Special Power Supply**
  Fully regulated power supply with double shielded power transformer ensures stable noise free operation even if the power line should vary.
MR85 Dimensions

The following dimensions can assist in determining the best location for your MR85. There is additional information on the next page pertaining to installing the MR85 into cabinets.
**Installation**

The MR85 can be placed upright on a table or shelf, standing on its four feet. It also can be custom installed in a piece of furniture or cabinet of your choice. The required panel cutout, ventilation cutout and unit dimensions are shown.

Always provide adequate ventilation for your MR85. Cool operation ensures the longest possible operating life for any electronic instrument. Do not install the MR85 directly above a heat generating component such as a high powered amplifier. If all the components are installed in a single cabinet, a quiet running ventilation fan can be a definite asset in maintaining all the system components at the coolest possible operating temperature.

A custom cabinet installation should provide the following minimum spacing dimensions for cool operation. Allow at least 2 inches (5.08 cm) above the top, 2 inches (5.08 cm) below the bottom and 1 inch (2.54 cm) on each side of the AM/FM Tuner, so that airflow is not obstructed. Allow 20 inches (50.8 cm) depth behind the front panel. Allow 1 inch (2.54 cm) in front of the mounting panel for knob clearance. Be sure to cut out a ventilation hole in the mounting shelf according to the dimensions in the drawing.
ANTENNA 1 AM ANT connector for the supplied McIntosh RAA1

TUNER 1 VARIABLE OUTPUTS supply audio signals that can be adjusted by the rear panel TUNER 1 OUTPUT LEVEL control

TUNER 1 FIXED OUTPUTS supply audio signals at a volume level that cannot be changed

TUNER 2 DATA IN jack reserved for the optional TM1 second tuner module

TUNER 2 FIXED and VARIABLE OUTPUTS jacks reserved for the optional TM1 second tuner module

EXT TUNER connects to the MR85 Tuner AM ANT input

POWER CONTROL IN jack accepts a turn on signal from a McIntosh Control Center. The OUT jack sends the turn on signal to another McIntosh product

TUNER 1 DATA IN jack receives tuner control and operating data from a McIntosh Control Center to control the Tuner 1 Module

Spaces reserved for the optional TM1 second tuner module

TUNER 2 OUTPUT LEVEL control reserved for the optional TM1 second tuner module

ANTENNA 1 75Ω (ohm) FM ANT connects to an external FM antenna or cable

TUNER 1 OUTPUT LEVEL control adjusts the volume level of the Variable Outputs

Connect the MR85 power cord to a live AC outlet. Refer to information on the back panel of the MR85 to determine the correct voltage
How to Connect

1. Connect a data cable from the TUNER 1 DATA IN jack to the TUNER DATA PORT of a McIntosh Control Center or preamplifier.
2. Connect a power control cable from the POWER CONTROL IN jack to the POWER CONTROL OUT or ACC jack of a McIntosh Preamplifier, Control Center or other McIntosh component.
3. Connect shielded cables from the TUNER 1 FIXED OUTPUTS to the TUNER INPUTS of a preamplifier or control center.
   Note: An optional connection would be to use the TUNER 1 VARIABLE OUTPUTS.
4. Connect the FM Antenna or Cable (from the Cable Company) to the MR85 Tuner 75Ω (Ohm) FM ANTenna connector.

5. Connect with the supplied cable, from the 5 Pin Socket of the McIntosh RAA1 Remote AM Antenna to the MR85 Tuner AM ANT DIN socket.
6. Plug the MR85 AC Power Cord into a live AC Outlet.
How to Connect with Optional Tuner Module

1. Connect a data cable from the TUNER 1 DATA IN jack to the TUNER DATA PORT of a McIntosh Multizone Control Center.

2. Connect a data cable from the TUNER 2 DATA IN jack to the LOCAL ZONE 1 AUX IN DATA PORT of a McIntosh Multizone Control Center.

3. Connect a power control cable from the POWER CONTROL IN jack to the POWER CONTROL OUT of a McIntosh Multizone Control Center.

4. Connect shielded cables from the TUNER 1 FIXED OUTPUTS to the TUNER INPUTS of a McIntosh Multizone Control Center.

Note: An optional connection would be to use the TUNER 1 VARIABLE OUTPUTS.

5. Connect shielded cables from the TUNER 2 FIXED OUTPUTS to the LOCAL ZONE 1 AUX IN AUDIO Jacks of a McIntosh Multizone Control Center.

Note: An optional connection would be to use the TUNER 2 VARIABLE OUTPUTS.

6. Connect the FM Antenna(s) or Cable (from the Cable Company) to the MR85 Tuner 75Ω (Ohm) FM ANTenna connector for both Tuner 1 and 2.

Note: If the same FM Antenna or Cable (from the Cable Company) is used for both Tuner 1 and 2, a suitable coaxial splitter must be utilized.

7. Connect with the supplied cables, from the 5 Pin Socket of the McIntosh RAA1 Remote AM Antenna(s) to the MR85 Tuner AM ANT DIN socket(s) for both Tuner 1 and 2.

8. Plug the MR85 AC Power Cord into a live AC Outlet.
Front Panel Controls, Displays, Push-Buttons and Switch

- **Enters desired radio stations and custom names into memory**
- **Indicates the Preset Memory Location**
- **Indicates the Broadcast Band of the Radio Station**
- **Indicates reception of a FM Stereo Signal**
- **Turns all AC Power On or Off**

- **Selects Preset Stations and is used for custom station naming**
- **Indicates the Radio Station Frequency**
- **Indicates the relative Signal Strength of the radio station signal**
- **Tuning Knob for manual tuning of radio stations**

- **Selects front panel display brightness and display cursor position during custom station naming**
- **Selects the Mono Mode of operation**
- **Select AM or FM tuning bands**
- **Selects the Automute Function which mutes the audio between radio stations when manually tuning**

- **Adds Spatial Audio Enhancement to the received sound**
- **Selects which tuner module is controllable from the front panel and displayed**
- **Automatically tunes up or down the AM or FM broadcast band**
- **Turns the MR85 On and Off**
How to Operate

Power On
Press the POWER switch to ON. The Red LED, above the STANDBY/ON Push-button, lights to indicate the MR85 is in Standby Mode. To turn ON the MR85 press the STANDBY/ON push-button. Refer to figure 1.

Note: The POWER Switch is only intended to be switched OFF when the MR85 Tuner is not used for extended periods of time, like while away on vacation. During normal operation, the POWER Switch should stay in the ON position. Press the STANDBY/ON Push-button for turning the MR85 ON and OFF. When the Power Control Cable is connected to a McIntosh Control Center, A/V Multizone System Controller or Preamplifier, the MR85 Tuner will automatically switch ON and OFF.

The McIntosh MR85 is an advanced design AM/FM Tuner with many desirable performance features to enhance your enjoyment of radio broadcasts. There are three modes of tuning to an AM/FM Broadcast Station. There is Manual Tuning using the TUNING Knob; Seek Mode Station Selection using the SEEK ▲ (Up) and ▼ (Down) Push-button(s); and Preset Station Selection using the PRESET Selection Knob.

Note: When the MR85 AM/FM Tuner is connected to a McIntosh Control Center, A/V Multizone System Controller or Preamplifier via a data connection, the tuner functions such as SEEK, direct PRESET Selection and REVIEW of Preset Stations may be controlled by the McIntosh Remote Control and/or Keypad.

Preset Selector Switch
The PRESET Selection Switch allows selection of desired radio stations that have already been stored into memory. There are up to 9 AM and 9 FM stations that can be stored for the Tuner 1. The optional secondary Tuner 2 Module also has up to 9 AM and 9 FM stations that can be stored into memory. The PRESET Selection Switch also assists in changing the Front Panel Alphanumeric Display from indicating the Station Frequency (default), to displaying personalized names of your choice. Example, instead of the Front Panel Display showing Preset number 3 as “105.70 FM” it could display “JAZZ 7”. Refer to “How to Assign Presets Stations and Custom Names” for further information.

Note: The PRESET Selection Switch will not access Station Presets that have been left blank. If no Presets have been assigned, the Front Panel Display will show “NO PRESETS” until at least one station has been entered into memory. Refer to figure 2 below.

Figure 2

Manual Tuning
Manual Tuning is provided through the Front Panel TUNING Knob. Rotate the TUNING Knob clockwise to tune up in frequency, 10kHz steps for AM or 200kHz steps for FM. Spin the knob to tune up continuously. Rotate the TUNING Knob counterclockwise in the same manner to tune down in frequency. When a station is selected, the Front Panel Display will indicate (from left to right) a Preset Number, if that station has been assigned a Preset, the FM Station Frequency, the received Stations Signal Strength from 1 to 9, and a dot (located to the right of the Signal Strength Digit) if the station is broadcasting stereo.

Note: FM band indications are in Megahertz. In the US and Canada, they change frequency in 200kHz steps. The second digit to the right of the dot which displays a 0, is used for FM stations in Europe where stations change in 50kHz steps. In Europe and Japan, the AM display changes in 9kHz steps.

Figure 1
Enter Mode
The ENTER Push-button is used to enter into memory, desired AM or FM radio stations and any custom naming you might wish. A station Preset and its custom name may also be cleared from memory using the ENTER Push-button. The LED above the ENTER Push-button will light when in the Preset Enter Mode.

Display Modes
The DISPLAY Push-button allows for adjustment of the Front Panel Alphanumeric Display Brightness from Off (0) to Bright (31) and for Custom Naming Station Presets with the name of your choice. Refer to figure 3.

Spatial Enhancement
Press the Spatial push-button to add Audio Enhancement to either an AM or FM signal. For example, AM Stations with monaural signals will have a simulated stereo effect. The LED above the SPATIAL Push-button will light when in the Spatial Mode.

Note: The Spatial Enhancement function is for the Tuner 1 only.

Mono Mode
Press the MONO Push-button to combine left and right stereo signals to monaural. This is useful when the MR85 Tuner is receiving a very weak Stereo Signal that might be accompanied with a high degree of background noise. By switching to MONO Mode, most of the background noise will disappear, thus making the station more listenable. The LED above the MONO Push-button will light when in the MONO Mode.

Note: When the tuned to an AM Radio Station the tuner will automatically switch to the MONO Mode.

Tuner Selector
The Tuner Selector selects between the default Tuner 1 and the optional secondary Tuner 2 Module, if installed. Once the desired tuner is selected, the Front Panel Controls including Station Selection and Preset Assignment may be performed. The Number 1 LED above the TUNER Push-button will light, indicating when Tuner 1 has been selected and the Number 2 LED above the TUNER Push-button will light when Tuner 2 Module is selected.

Note: If the optional secondary Tuner 2 Module is not installed, the TUNER Selector will stay on the TUNER 1 selection.

AM/FM Band Selector
Select the AM or FM Broadcast Band by pressing the AM/FM push-button.

Note: When the Front Panel Alphanumeric Display is displaying the radio station frequency (default), the letters AM or FM will appear to the right of the tuned stations frequency to indicate the broadcast band.

SEEK ▲ and ▼
Press and release the Front Panel SEEK ▲ (Up) and ▼ (Down) Push-button(s), to move from one station to the next. Press and hold the SEEK Push-button to move continuously up or down the broadcast band.

Automute Function
When manually tuning through the band, the outputs will unmute only when a strong radio station is sensed and received. Sometimes it is desirable to search for a very weak station and the AUTOMUTE Function can be switched OFF. This will allow all stations to be heard as well as noise and interference normally found in-between stations. The LED above the AUTOMUTE Push-button will light when the Automute Function is active.

Note: The AUTOMUTE Function can only be switched OFF when manually tuning to a station using the TUNING Knob. When using SEEK ▲ (Up) and ▼ (Down) Push-button(s), the AUTOMUTE Function will always be engaged.

Output Level Control (Rear Panel)
There are both FIXED OUTPUTS and VARIABLE OUTPUTS on the MR85 Rear Panel for Tuner 1 and optional secondary Tuner 2 Module. For most applications, the volume level at the FIXED OUTPUTS will match other sources connected to the McIntosh Control Center or Preamplifier. If the volume level from the tuner is higher than from other sources, the VARIABLE OUTPUTS together with the OUTPUT LEVEL Control may be used to reduce the tuner volume level.

Reset of Microprocessor
In the event that the controls of the MR85 stop functioning, there is a built-in user reset function. Press the POWER switch to the OFF position and wait for two minutes. Then press the POWER switch to ON; the Red LED above the
STANDBY/ON Push-button, lights to indicate the MR85 is in Standby Mode. To turn ON the MR85, press the STANDBY/ON Push-button.

*Note: The above condition is usually caused by either interruptions or changes in AC voltage.*

### How to Assign Preset Stations

The MR85 AM/FM Tuner allows for presetting your favorite radio stations into memory. It will also remember any desired audio modes of operation such as Stereo/Mono and Spatial Enhancement for each station separately. To enter Presets and Audio Modes follow the below steps:

*Note: The MR85 Tuner 1 and the optional secondary Tuner 2 Module each can store up to 9 AM and 9 FM stations.*

1. Select the AM or FM broadcast band.
2. Tune to the desired radio station with either the Front Panel TUNING Knob or the SEEK ▲ (Up) and ▼ (Down) Push-button(s).
3. Optionally, select the Mono and/or Spatial Enhancement Modes of Operation for that station.
   *Note: The Spatial Enhancement Mode is only applicable to the Tuner 1. All AM Radio Stations are automatically received in Mono.*
4. Momentarily press and release the Front Panel ENTER push-button. The LED above the ENTER push-button will light and the Front Panel Display will indicate 1 AVAILABLE, which is the first of 9 Preset Numbers that can be assigned. Refer to figure 4.
   *Note: Presets are automatically assigned in order from 1 to 9.*
5. Press and release the front panel ENTER push-button a second time to store the Preset into memory, the LED above the ENTER push-button will turn off and that station Preset Selection will be assigned Preset Number 1. The assigned Preset Number will appear on the Front Panel Display to the right of the Station Frequency whenever it is selected. Refer to figure 5.
6. Assign additional station Presets by performing steps 1 through 5 until a total of 9 AM and 9 FM Station Presets have been assigned. Each time you assign an additional Preset Number, the Front Panel Display will indicate the number of the next available preset.
   *Note: If all 9 presets are assigned and you press ENTER, the display will indicate the station selected for preset number 1.*
7. To verify the Station Preset(s) you have just entered rotate the PRESET Knob clockwise or counterclockwise to cycle through and confirm your preset assignments.

### How To Clear an Assigned Station Preset

1. Press and release the ENTER Push-button; the LED above the ENTER Push-button will light.
2. Rotate the PRESET Knob clockwise or counterclockwise to select the desired Station Preset you wish to clear.
3. Press and Hold the ENTER Push-button for approximately 3 seconds until the Front Panel Display indicates the word CLEARED. Refer to figure 6.

*Note: If you wish to replace an already assigned Station Preset with another radio station, it is not necessary to clear the Preset first, just enter in the new station for that Preset. The new station will automatically replace the previously assigned station.*
4. To clear any additional Station Presets perform steps 1 through 3 again.
How to Assign Custom Names

The Front Panel Alphanumeric Display of the MR85 together with the built in memory, allows for Custom Naming of each Station Preset. Instead of the Front Panel just indicating the frequency of the received radio station, it could indicate such things as type of music played on that station. The assignable characters include the alphabet, numbers, and symbols. To enter Custom Presets Names follow the below steps:

Note: In the below example, we will Custom Name an already assigned FM Station Preset Number 1 which has a frequency of 99.10MHz and rename it JAZZ 7. The Custom Naming of a Station is applicable for both Tuner 1 and the optional secondary Tuner 2 Module.

1. Momentarily press and release the Front Panel ENTER push-button. The LED above the ENTER push-button will light.
2. Select Station Preset Number 1, by rotating the PRESET Knob clockwise or counterclockwise.
3. Push the DISPLAY Push-button and the Front Panel Display of the Station Frequency (default) will be replaced by “1”, a blank space, and then a flashing “A”. Refer to figure 7.

Note: The number 1 is the assigned Preset Number followed by the first of eight possible characters of the new Assigned Preset Name.

4. Rotate the TUNING Knob clockwise to scroll through the alphabet until the character “J” appears. Refer to figure 8.

5. Rotate the PRESET Knob clockwise until the “A” appears to the right of the “J”. Refer to figure 9.

6. Rotate the PRESET Knob clockwise again until the “A” appears to the right of the “JA”.
7. Rotate the TUNING Knob clockwise to scroll through the alphabet until the character “Z” appears. Refer to figure 10.

8. Rotate the PRESET Knob clockwise again until the “A” appears to the right of the “JAZ”.
9. Repeat step 7 and refer to figure 11.

10. Rotate the PRESET Knob clockwise again until the “A” appears to the right of the “JAZZ”.
11. Rotate the TUNING Knob clockwise to scroll through the alphabet until no character appears.
12. Rotate the PRESET Knob clockwise again until the “A” appears to the right of the “JAZZ”.
13. Rotate the TUNING Knob clockwise to scroll through the alphabet and numbers until the “7” digit appears. Refer to figure 12.

14. Press and release the front panel ENTER push-button a second time to store the newly assigned Preset Name into memory; the LED above the ENTER push-button will turn Off and the assigned Preset Name will appear on the Front Panel Display.

Note: If a Preset has been Custom Named, it is possible to restore the default Station Frequency Display if desired. Press the ENTER Push-button once, then press and hold the DISPLAY Push-button for 3 seconds.

Benefits of Adding the Second McIntosh AM/FM TM1 Tuner Module

- Adds the functionality of a second McIntosh Quality Tuner to your MR85 for a modest additional investment.
- Listen to one Radio Station while recording another.
- Add Multiroom enjoyment, listen to two different Radio Stations in different rooms of your home simultaneously.
- Your McIntosh Dealer can install the Second TM1 Tuner Module into your MR85 for you at any time, usually while you wait.

Packing Instructions

In the event it is necessary to repack the equipment for shipment, the equipment must be packed exactly as shown below. It is very important that the four plastic feet are attached to the bottom of the equipment. This will ensure the proper equipment location on the bottom pad. Failure to do this will result in shipping damage.

Use the original shipping carton and interior parts only if they are all in good serviceable condition. If a shipping carton or any of the interior part(s) are needed, please call or write Customer Service Repair Department of McIntosh Laboratory. Please see the Parts List for the correct part numbers.
